COMMERCIALS & GTM

Vultiagent

Unified pricing model. How we price it. How we sell it.

APRIL 2026 / INTERNAL

COST & PRICING

Unified Pricing Model

What each model costs us. What users pay. How VULT holding fits in. How we degrade gracefully. What we still need to decide.

COST & PRICING

What Each Model Costs Us

339 API calls, 13 operation types, real agent backend with 66 live MCP tools.
Three models survive.

MODEL	AVG COST/OP	LATENCY	SUCCESS	VERDICT
Gemini 2.5 Flash	$0.003	3.2s	100%	WORKHORSE
Claude Haiku 4.5	$0.029	5.7s	100%	MID-TIER
Claude Sonnet 4	$0.134	6.8s	100%	PREMIUM
DeepSeek V3.2	$0.013	17.6s	100%	TOO SLOW
Llama 4 Maverick	$0.004	3.1s	97%	LEAKS SYNTAX
Claude Opus 4	$0.065	14.0s	100%	$20 IN 7MIN

Prompt Trimming
82% of every request is fixed overhead. Filter tools by intent to halve all costs.

Prompt Caching
Anthropic cache hit = 65% further reduction on Haiku/Sonnet. Ships Phase 2.

Keyword Pre-Router
Regex classifier for obvious intents. Skips Haiku routing call on 80%+ of traffic.

COST & PRICING

Who Gets Access to What

Three models mapped to capabilities. Free users get a Watt budget.
Premium/Pro unlock advanced features.

CAPABILITY	MODEL	FREE	PREMIUM	PRO
Chat, balance, price	FLASH	Yes (from budget)	Yes	Yes
Send, swap, bridge (MCP)	FLASH	Yes (from budget)	Yes	Yes
Basic DeFi (deposit/withdraw)	FLASH	Yes (from budget)	Yes	Yes
Planning mode	HAIKU	No	Yes	Yes
Cron scheduling	HAIKU	No	Yes	Yes
Monitoring / alert evaluation	HAIKU	No	Yes	Yes
Strategy / portfolio analysis	SONNET	Taste*	Yes	Yes
Autonomous agents	SONNET	No	No	Yes
Stop-loss / TWAP	SONNET	No	No	Yes

*Free users can taste Sonnet through their budget (~4 strategy queries). The hook — Sonnet answers are noticeably better, creating upgrade desire.

COST & PRICING

What Users See: Watts (NAME TBD)

Each tier comes with a monthly Watt budget. Operations cost Watts, not dollars. Users think in Watts, we think in margins. 1 Watt ≈ $0.01 — the agent's energy currency for AI operations.

FREE

Explorer

$0

200 W/mo

Chat, balances, sends, swaps, basic DeFi

~250 Flash ops or ~4 Sonnet queries

After budget: degrades, never locks out

PREMIUM

Active Trader

$9.99 /mo

1,000 W/mo

Everything in Free + planning, crons, monitoring, strategy

Haiku + Sonnet unlocked

After budget: graceful downgrade

PRO

Power User

$29.99 /mo

5,000 W/mo

Everything in Premium + autonomous agents, stop-loss, TWAP

Full Sonnet access

Credit packs for overages

Why Watts, Not Dollars

Dollar amounts create micro-loss anxiety on every action. An abstracted currency (like Robux, airline miles, game gems) reduces spending friction while maintaining a real cost floor. Crypto users are financially sophisticated — they'll appreciate knowing 1W ≈ $0.01 without seeing "$0.25 deducted" every swap.

Watt Costs by Operation

Flash ops (chat, balance, send): **1W**. Haiku ops (planning, crons): **3W**. Sonnet ops (strategy, autonomous): **15W**. First-time action: agent tells you the cost once, then never asks again.

TOKEN ALIGNMENT

VULT Holding = Unified Benefits

Same VULT you hold for fee reduction also unlocks agent features. One system, not two. Two models under consideration:

OPTION A — PURE TIERS (PAAAO)

Tier Unlock Only, No Bonus Watts

Holding VULT gives fee discounts + agent tier unlock. No bonus Watts. Simple, aligned with core app. Platinum+ get the full subscription value for free.

TIER	VULT	FEE	AGENT	SAVES
Bronze	1,500	45bp	Free	–
Silver	3,000	40bp	Free	–
Gold	7,500	30bp	Free	–
Plat	15,000	25bp	Prem	$9.99/mo
Diamond	100,000	15bp	Pro	$29.99/mo
Ultimate	1,000,000	0bp	Pro+	$29.99/mo

OPTION B — SLIDING SCALE + KICKERS

Continuous Curve with Tier Milestones

Every VULT earns Watts on a diminishing curve. At each tier threshold, a milestone kicker rounds up to a clean number. Fee discounts still apply at tiers.

TIER	VULT	CURVE	KICKER	TOTAL W/MO
—	500	6	–	6
Bronze	1,500	13	+12	25
Silver	3,000	20	+30	50
Gold	7,500	39	+36	75
Plat	15,000	61	+64	125
Diamond	100,000	201	+199	400
Ultimate	1,000,000	832	+668	1,500

Curve: $10 \times (\text{vult} / 1000)^{0.65}$. Between tiers: raw curve value. At tiers: snaps to round milestone.

One System

Hold VULT → lower swap fees AND agent tier unlock. No separate staking mechanism at launch. Users understand "hold more VULT = better everything."

VULT Holders Still Pay AI Cost

Platinum+ holders who unlock tiers via holding still get the AI budget. This costs us real money but drives token demand. Swap fees go to VULT buyback — virtuous cycle.

COST & PRICING

Never Hard-Stop. Always Degrade Gracefully.

Market best practice (Cursor, OpenAI): never leave users with zero functionality.

75% — **Gentle nudge**
"You've used 75% of your monthly tokens. Upgrade to Premium for 5x more."

100% — **Budget depleted — Sonnet/Haiku disabled**
Reasoning and planning queries return: "This needs our advanced AI. Top up 200 tokens for $2.49 or upgrade to continue."

100% — **Basic ops continue on Flash (degraded)**
Simple swaps, sends, and balance checks keep working but with slower, simpler responses. User never loses access to core wallet functionality.

150% — **Hard stop on all AI (emergency only)**
Only if user is burning through degraded ops at extreme rate. Manual wallet functions in core app always available.

First-Time Action UX

First time a user triggers any action type, the agent says: *"This is your first swap — just so you know, swaps use 3 Watts per operation. You have 197 remaining. Continue?"* Then never asks again. Users can always check costs by asking the agent directly.

COST & PRICING

Credit Packs & Unit Economics

Top-up packs for when budget runs out. 20–25% markup on small packs, tapering to 10% on large. Volume discount drives upgrades.

Credit Packs

PACK	TOKENS	PRICE	PER TKN
Starter	200	$2.49	$0.0125
Standard	500	$5.99	$0.012
Large	1,000	$10.99	$0.011

Large pack priced near subscription intentionally — gateway to upgrading.

Unit Economics at 10K Users

SEGMENT	USERS	REVENUE	NET
Free (80%)	8,000	$0	-$6.2K
Premium (15%)	1,500	$15.0K	+$6.3K
Pro (5%)	500	$15.0K	+$5.4K
Total	10,000	**$30.0K**	**+$5.5K**

Cashflow positive at worst case. Real utilization (40–60%) pushes net to ~$15–20K/mo.

Swap/Bridge Fees → VULT

All swap fees go to VULT buyback/burn. ~$14K/mo at 10K user volumes. Separate from team cashflow but critical for token ecosystem health.

Large Pack = Upgrade Gateway

The 1,000W pack at $10.99 is intentionally priced near the $9.99/mo Premium sub. Users doing repeat top-ups realize the subscription is better value — natural conversion funnel.

BUSINESS MODEL

Revenue Beyond Subscriptions

Consumer subs are the floor. The MCP server turns Vulti Agent from an app into infrastructure.

REVENUE STREAM	PHASE	MODEL	YEAR 1 POTENTIAL
Consumer subs	1	Free / $9.99 Prem / $29.99 Pro	$360K–$1.8M
Credit packs	1	$2.49–$10.99 top-ups	Scales w/ usage
Swap/bridge fees	1	15–50bps → VULT buyback	Token value
API / MCP licensing	1	1K free calls/mo, $0.005–0.01/call	$500K–900K
Ecosystem grants	1	Chain grant programs (Sui, Base, Sei)	$500K–1M
White-label wallet	2	Per-active-wallet + integration fees	$200K–500K
Enterprise DAO custody	3	Annual SaaS, AI-native multisig	$250K–500K

$1.5–3M
YEAR 1 DIVERSIFIED

DISCUSSION

Open Questions for the Team

VULT Bonus: Tiers or Curve?

Option A (tier thresholds) is simpler and aligned with existing app. Option B (sliding scale) rewards any accumulation but adds complexity. Can we hybrid — tier unlocks + small continuous drip?

$2 Free Budget: Right Number?

200 W/mo lets casual users feel free but costs us ~$0.78/user/mo (after markup). For 8K free users = $6.2K/mo burn. Should it be $1.50? $1? Need utilization data.

Flash Tool Reliability

Can Gemini 2.5 Flash reliably execute our 22 MCP tools? Need to test top 10 flows for reliability & latency. If <95% success, cheap models save nothing if swaps fail.

Can We Afford Free Watts for VULT Holders?

Both options give Platinum+ holders free AI access. How many Platinum+ holders exist today? What's the real AI cost to subsidize them? At what holder count does it become unsustainable? Need data from core app.

Degradation vs Hard Stop

When free budget depletes: continue basic Flash ops (costs us, keeps user happy) or hard stop everything (saves money, risks churn)? Recommend: continue basic ops, gate Sonnet/Haiku.

Credit Pack Pricing

$2.49 for 200W / $5.99 for 500W / $10.99 for 1,000W. Large pack intentionally near sub price as upgrade gateway. Right markup? Too high risks churn, too low and nobody subscribes.

MISSION #14

Billing & Token Gating Infrastructure

Everything needed to ship Watt budgets. Validates the pricing model with real data, then enforces it.

1. Flash Reliability Testing

Run top 10 tool flows against Gemini 2.5 Flash. Measure success rate and latency per operation. Target >95%. If Flash can't reliably execute our MCP tools, the cost model doesn't work.

2. Measure Token Cost per Operation

Instrument the agent to log LLM token counts per action type. Calculate real per-op costs across Flash, Haiku, Sonnet. Map each operation to its Watt price.

3. Keyword Pre-Router

Regex/keyword classifier for obvious intents (balance check, simple send). Routes directly to Flash, skipping the Haiku classification call on 80%+ of traffic.

4. Token Gating System

Track per-user Watt balance. Deduct on each operation. Enforce tier access — gate Haiku/Sonnet features when budget depleted. Graceful degradation to Flash. Credit pack purchase flow.

Steps 1–2 are prerequisites — we need real cost data before committing to Watt prices. Steps 3–4 are the billing system itself.

GO TO MARKET

How We Get Users

Rename in-place like Trust Wallet did. Let the product demo itself like ChatGPT did. Let engineers be the brand like Uniswap and Monad did.

GO TO MARKET

Station → Vulti Agent

Trust Wallet and MyEtherWallet both renamed app listings in-place during rebrands, preserved ratings, downloads, and user base.

Now — **Tease the Rebrand**
Hype screen in Station app: "Something is coming." Station X account teases. In-app countdown banner with email capture.

Wk 2 — **Founder Thread + Rename**
Vultisig founder thread on X: "We acquired Station because it had the user base. Now we're giving it an AI brain." App listing renamed: "Vulti Agent (formerly Station)." Early access to 15–20 mid-tier crypto influencers.

Wk 3 — **Ship the Update**
Agentic wallet update to Station users. Early Supporter on-chain attestation for first-week updaters. "Formerly Station" in subtitle for 2–3 months, then drop.

GO TO MARKET

The AI Demo Is the Marketing

ChatGPT grew because people shared screenshots of outputs. Nobody else has a natural language wallet. Every demo is marketing.

Short-Form Demos

"I asked my wallet to swap ETH to USDC and it did it." Side-by-side: 8 clicks in MetaMask vs. 1 sentence in Vulti Agent.

MPC Security Narrative

"No seed phrase. Keys split across devices with threshold cryptography." Fireblocks built $8B on "institutional-grade MPC" — we bring it to consumers.

MCP as Distribution

Every AI assistant that connects via MCP becomes a channel. List on agent directories, partner with frameworks (CrewAI, LangChain). The protocol is the moat.

AI × Crypto Positioning

AI agent platforms need wallet infrastructure. Our MCP server lets any AI agent manage a wallet — positioning us as the default wallet layer for AI agents.

BUILDER-LED MARKETING

Engineers Are the Brand

In crypto, technical depth signals legitimacy. Monad, Eigenlayer, and Uniswap grew through engineers posting technical content.

@vultisig: 1 Thread / Week

Every Friday: "what we shipped" thread with screenshots or demo clip. Owned by community manager, sourced from engineers. One substantive thread beats seven filler posts.

Engineers Post When Interesting

No schedule, no quota. Cool bug, nice before/after, wild edge case — post it, tag @vultisig. Authenticity > consistency.

"Building @vultisig" in Bios

One brand, one audience. Every engineer's bio links to @vultisig. Pinned tweet explains Vulti Agent. Every personal post passively drives discovery.

Open Question: Who Owns Social?

Weekly threads, replies, DMs, quote-tweeting engineers — this needs an owner. Engineers provide raw material but shouldn't be the ones publishing. Who runs @vultisig day-to-day?

GO TO MARKET

Where 10K Users Come From

The rebrand seeds the base. Three engines sustain growth after the buzz fades.

~40% / REBRAND

Station User Base

Existing users migrate via in-app update. Hype screen + early supporter badge drives urgency. App store listing renamed in-place — preserves ratings and SEO.

~35% / AI ECOSYSTEM

Default Wallet for AI

Every AI agent that needs to transact on-chain becomes a distribution channel. MCP server means Claude, GPT, and custom agents all funnel users to Vultisig wallets.

~25% / DEMO-DRIVEN

Product Sells Itself

"I asked my wallet to swap ETH" — screenshots go viral like early ChatGPT. Target crypto media, SEO on "AI crypto wallet", influencer early access.
